

Appendix A

<i>Fibrosis Score (n = 16)</i>							
	F0	F0-F1	F1	F2	F2-F3	F3-F4	F4
%	38%	6%	6%	6%	25%	6%	13%
<i>n</i>	6	1	1	1	4	1	2
<i>HCV Genotype (n = 23)</i>							
	1a	1a or 1b	1b	2b	Indeterminate		
%	57%	22%	13%	4%	4%		
<i>n</i>	13	5	3	1	1		

Supplemental Table. Fibrosis score and HCV genotype characteristics of patients with available data.

Appendix B

Supplemental Figure. Timeline of PAP Application Creation to Treatment Initiation.

Representation of the time between each step within the patient assistance program process, beginning with creation of the application. The application is typically created in clinic when a patient is scheduled for an appointment. The patient and the prescribing provider must sign the application prior to the completed application being submitted to the pharmaceutical company via fax. Following submission, the application may be approved or denied. If approved, the medication is then shipped to the clinic. In some cases, the application was created and submitted on the same day.
